Table of Issues

To edit this document

In the report.tex file, choose:

- **\soldraftfalse** to remove draft mode (watermarks, advises)
- **\solmodulestrue** to display modules by chapter instead of contracts
- **\soltablestrue** to display tables for parameters and returns
- **\solissuesfalse** to remove the table of issues

Issues can be entered with:

- **\issueCritical{title}{text}**
- **\issueMajor{title}{text}**
- **\issueMinor{title}{text}**

Chapter 1

Introduction

The present document is an official submission to the 13^{th} contest of the ForMet sub-governance: *13 Radiance-DEX Phase 0 Formal Verification* `https://formet.gov.freeton.org/proposal?isGlobal=false&proposalAddress=0%3A07783c48e8789fa1163699e9e3071a47`

The specification was: *The contestants shall provide the informal audit of the central Radiance-DEX smart contracts (*`DEXClient`*,* `DEXConnector`*,* `DEXPair`*,* `DEXRoot RootTokenContract`*,* `TONTokenWallet`*), hereinafter referred to as "smart contracts". where the detailed description of the "informal audit" is described below. All debot contracts are excluded from the present contest.*

and *All the source codes must be provided by the authors via* `https://t.me/joinchat/-3zDgM62gQ02OGUy` *Telegram group. The code to be audited has a hash 7d65f0d3b85e504ac33f01395b6ba0ffef9d5fe5 (branch main, link -* `https://github.com/radianceteam/dex2/commit/7d65f0d3b85e504ac33f01395b6ba0ffef9d5fe5` *)*

and finally *Contestants shall submit a document in PDF format that covers:*

- *All the errors found*
- *All the warnings found*
- *All the "bad code" (long functions, violation of abstraction levels, poor readability etc.)*

Errors and warnings should be submitted to the developers as early as possible, during the contest, so that the code can be fixed immediately.

Chapter 2

Overview

The infrastructure is composed of a set of DEX specific contracts, associated with tokens contracts (developed by Broxus, to the best of our knownledge).

The DEX contracts are :

DEXRoot: The "root" contract, used to perform global operations, such as creating "client" contracts;

DEXClient: The contract with which a user may interact with the system.

DEXPair: The contract associated with a given pair of tokens (root token contracts)

DEXConnector: A simplified interface to interact with token contracts. The goal is probably to be able to interact with different implementations/interfaces of token contracts.

The token contracts are :

RootTokenContract: The root token contract, shared by all the wallet contracts for a given token;

TONTokenWallet: The wallet contract, containing the balance associated either with a public key or (exclusive) a contract address;

Compared to `https://github.com/broxus/broxus/ton-eth-bridge-token-contracts/`, the two token contracts have only been modified to change the `ton-solidity` pragma version.

All the DEX contracts use a static `soUINT` field to be able to instanciate several ones for a given public key or other static field.

Chapter 3

General Remarks

In this chapter, we introduce some general remarks about the code, that are not specific to this project, but whose occurrences have been found in the project in several locations.

3.1 Readability

3.1.1 Typography

Minor issue: Typography of static variables
A good coding convention is to use typography to visually discriminate static variables from other variables, for example using a prefix such as `s_`.

This issue was found everywhere in the code of DEX and token contracts.

Minor issue: Typography of global variables
A good coding convention is to use typography to visually discriminate global variables from local variables, for example using a prefix such as `m_` or `g_`.

This issue was found everywhere in the code of DEX and token contracts.

Minor issue: Typography of internal function
A good coding convention is to use typography to visually discriminate public functions and internal functions, for example using a prefix such as `_`.

This issue was found everywhere in the code of DEX and token contracts.

3.1.2 Naming of Errors

Minor issue: Naming of Errors
A good coding convention is to define constants instead of using direct numbers for errors in `require()`.

This issue was found everywhere in the code of DEX contracts, but not for token contracts.

3.2 Security

Critical issue: No Accept All Methods
Public methods using `tvm.accept()` without any prior check should not exist. Indeed, such methods could be used by attackers to drain the balance of the contracts, even with minor amounts but unlimited number of messages.

This issue was found in the code the DEX contracts, especially with the `alwaysAccept()` modifier. Methods using this modifier should check the origin of the message and limit `tvm.accept()` to either the user or known contracts.

Critical issue: No Require after Accept
Methods using `tvm.accept()` should never use `require()` after the accept. Indeed, a `require()` failing after `tvm.accept()` will cost a huge amount of gas, as all shards will execute the failing method.

This issue was found in the code of the DEX contracts. Methods should always keep calls to `require()` before `tvm.accept()`, and if it is not possible, should not fail but should *return* an error code instead.

Chapter 4

Contract DEXClient

In file `DEXClient.sol`

4.1 Contract Inheritance

ITokensReceivedCallback	
IDEXClient	
IDEXConnect	

4.2 Type Definitions

Advises
Check that types have the correct integer types (Pubkey : uint256, Amount: uint128, Time: uint64).

4.2.1 Struct Connector

root_address	address	
souint	uint256	
status	bool	

```
29  struct Connector {
30    address root_address;
31    uint256 souint;
32    bool status;
33  }
```

4.2.2 Struct Callback

token_wallet	address	
token_root	address	
amount	uint128	
sender_public_key	uint256	
sender_address	address	
sender_wallet	address	
original_gas_to	address	
updated_balance	uint128	
payload_arg0	uint8	
payload_arg1	address	
payload_arg2	address	

```
43  struct Callback {
44    address token_wallet;
45    address token_root;
46    uint128 amount;
47    uint256 sender_public_key;
48    address sender_address;
49    address sender_wallet;
50    address original_gas_to;
51    uint128 updated_balance;
52    uint8 payload_arg0;
53    address payload_arg1;
54    address payload_arg2;
55  }
```

4.2.3 Struct Pair

status	bool	
rootA	address	
walletA	address	
rootB	address	
walletB	address	
rootAB	address	

```
60  struct Pair {
61    bool status;
62    address rootA;
63    address walletA;
64    address rootB;
65    address walletB;
66    address rootAB;
67  }
```

4.3 Constant Definitions

Advises
Use a naming convention to distinguish constants from other, such as all uppercase names.
Use `ton` unit instead of nanotons for cost constants to avoid numbers with too many zeroes.

uint128	GRAMS_CONNECT_PAIR	Initialized to 500000000
uint128	GRAMS_SET_CALLBACK_ADDR	Initialized to 100000000
uint128	GRAMS_SWAP	Initialized to 500000000
uint128	GRAMS_PROCESS_LIQUIDITY	Initialized to 500000000
uint128	GRAMS_RETURN_LIQUIDITY	Initialized to 500000000

```
23  uint128 constant GRAMS_CONNECT_PAIR = 500000000;
24  uint128 constant GRAMS_SET_CALLBACK_ADDR = 100000000;
25  uint128 constant GRAMS_SWAP = 500000000;
26  uint128 constant GRAMS_PROCESS_LIQUIDITY = 500000000;
27  uint128 constant GRAMS_RETURN_LIQUIDITY = 500000000;
```

4.4 Static Variable Definitions

Advises
Use a naming convention to distinguish static variables from global variables, such as `s_` prefix.

address	rootDEX	
		used in @1.DEXClient.createNewPair
		used in @1.DEXClient.createNewPair
		used in @1.DEXClient.:constructor
uint256	soUINT	
TvmCell	codeDEXConnector	
		used in @1.DEXClient.connectRoot
		used in @1.DEXClient.computeConnectorAddress

```
18  address static public rootDEX;
19  uint256 static public soUINT;
20  TvmCell static public codeDEXConnector;
```

4.5 Variable Definitions

Advises
Use a naming convention to distinguish global variables from local variables, such as `g_` or `m_` prefix.

address []	rootKeys	
		used in @1.DEX-Client.getAllDataPreparation
		used in @1.DEX-Client.connectCallback
mapping (address => address)	rootWallet	
		used in @1.DEX-Client.sendTokens
		used in @1.DEX-Client.returnLiquidity
		used in @1.DEX-Client.returnLiquidity
		used in @1.DEX-Client.processSwapB
		used in @1.DEX-Client.processSwapA
		used in @1.DEX-Client.processLiquidity
		used in @1.DEX-Client.processLiquidity
		used in @1.DEX-Client.isReadyToProvide
		used in @1.DEX-Client.isReadyToProvide
		used in @1.DEX-Client.isReadyToProvide
		used in @1.DEXClient.isReady
		used in @1.DEXClient.isReady
		used in @1.DEX-Client.connectRoot
		assigned in @1.DEX-Client.connectCallback
		used in @1.DEX-Client.connectCallback
mapping (address => address)	rootConnector	
		used in @1.DEX-Client.sendTokens
		used in @1.DEX-Client.sendTokens
		used in @1.DEX-Client.returnLiquidity
		used in @1.DEX-Client.returnLiquidity
		used in @1.DEX-Client.processSwapB
		used in @1.DEX-Client.processSwapA
		used in @1.DEX-Client.processLiquidity
		used in @1.DEX-Client.processLiquidity
		used in @1.DEX-Client.isReadyToProvide
		used in @1.DEX-Client.isReadyToProvide

```
35  address[] public rootKeys;
36  mapping (address => address) public rootWallet;
37  mapping (address => address) public rootConnector;
38  mapping (address => Connector) connectors;
40  uint public counterCallback;
57  mapping (uint => Callback) callbacks;
69  mapping(address => Pair) public pairs;
70  address[] public pairKeys;
```

4.6 Modifier Definitions

Advises
Calling tvm.accept() without checking pubkey should not be allowed

4.6.1 Modifier alwaysAccept

```
73  modifier alwaysAccept {
74    tvm.accept();
75    _;
76  }
```

4.6.2 Modifier checkOwnerAndAccept

```
79  modifier checkOwnerAndAccept {
80    require(msg.pubkey() == tvm.pubkey(), 102);
81    tvm.accept();
82    _;
83  }
```

4.7 Constructor Definitions

4.7.1 Constructor

Advises
Check who can call the constructor. If the constructor sets global values, only legitimate users should be allowed.
Check that every argument is protected by a require().
If external users are allowed, their pubkey should be verified (`require(msg.pubkey() != 0 && msg.pubkey() == tvm.pubkey(),100)` , and tvm.accept() should be called.

```
85   constructor() public {
86     require(msg.sender == rootDEX, 103);
87     tvm.accept();
88     counterCallback = 0;
89   }
```

4.8 Public Method Definitions

4.8.1 Receive function

```
413  receive() external {
414  }
```

4.8.2 Function connectCallback

Parameters		
address	wallet	
Modifiers		
alwaysAccept	*no args*	

```
181  function connectCallback(address wallet) public override
         alwaysAccept {
182    address connector = msg.sender;
183    if (connectors.exists(connector)) {
184      Connector cc = connectors[connector];
185      rootKeys.push(cc.root_address);
186      rootWallet[cc.root_address] = wallet;
187      rootConnector[cc.root_address] = connector;
188      TvmCell bodySTC = tvm.encodeBody(IDEXConnector(connector).
             setTransferCallback);
189      connector.transfer({value: GRAMS_SET_CALLBACK_ADDR, bounce:
             true, flag: 0, body:bodySTC});
190      TvmCell bodySBC = tvm.encodeBody(IDEXConnector(connector).
             setBouncedCallback);
191      connector.transfer({value: GRAMS_SET_CALLBACK_ADDR, bounce:
             true, flag: 0, body:bodySBC});
192      cc.status = true;
193      connectors[connector] = cc;
194    }
195  }
```

4.8.3 Function connectPair

Parameters		
address	pairAddr	
Returns		
bool	statusConnection	
Modifiers		
checkOwnerAndAccept	*no args*	

```
92  function connectPair(address pairAddr) public checkOwnerAndAccept
        returns (bool statusConnection) {
93    statusConnection = false;
94    if (!pairs.exists(pairAddr)){
95      Pair cp = pairs[pairAddr];
96      cp.status = false;
97      pairs[pairAddr] = cp;
98      pairKeys.push(pairAddr);
99      TvmCell body = tvm.encodeBody(IDEXPair(pairAddr).connect);
100     pairAddr.transfer({value:GRAMS_CONNECT_PAIR, body:body});
101     statusConnection = true;
102   }
103 }
```

4.8.4 Function connectRoot

Parameters		
address	root	
uint256	souint	
uint128	gramsToConnector	
uint128	gramsToRoot	
Returns		
bool	statusConnected	
Modifiers		
checkOwnerAndAccept	*no args*	

```
158 function connectRoot(address root, uint256 souint, uint128
      gramsToConnector, uint128 gramsToRoot) public
      checkOwnerAndAccept returns (bool statusConnected){
159   statusConnected = false;
160   if (!rootWallet.exists(root)) {
```

```
161       TvmCell stateInit = tvm.buildStateInit({
162         contr: DEXConnector,
163         varInit: { soUINT: souint, dexclient: address(this) },
164         code: codeDEXConnector,
165         pubkey: tvm.pubkey()
166       });
167       TvmCell init = tvm.encodeBody(DEXConnector);
168       address connector = tvm.deploy(stateInit, init,
              gramsToConnector, address(this).wid);
169       Connector cr = connectors[connector];
170       cr.root_address = root;
171       cr.souint = souint;
172       cr.status = false;
173       connectors[connector] = cr;
174       TvmCell body = tvm.encodeBody(IDEXConnector(connector).
              deployEmptyWallet, root);
175       connector.transfer({value:gramsToRoot, bounce:true, body:body
              });
176       statusConnected = true;
177     }
178   }
```

4.8.5 Function createNewPair

Parameters		
address	root0	
address	root1	
uint256	pairSoArg	
uint256	connectorSoArg0	
uint256	connectorSoArg1	
uint256	rootSoArg	
bytes	rootName	
bytes	rootSymbol	
uint8	rootDecimals	
uint128	grammsForPair	
uint128	grammsForRoot	
uint128	grammsForConnector	
uint128	grammsForWallet	
uint128	grammsTotal	
Modifiers		
checkOwnerAndAccept	*no args*	

```
356   function createNewPair(
357     address root0,
358     address root1,
```

```
359     uint256 pairSoArg,
360     uint256 connectorSoArg0,
361     uint256 connectorSoArg1,
362     uint256 rootSoArg,
363     bytes rootName,
364     bytes rootSymbol,
365     uint8 rootDecimals,
366     uint128 grammsForPair,
367     uint128 grammsForRoot,
368     uint128 grammsForConnector,
369     uint128 grammsForWallet,
370     uint128 grammsTotal
371   ) public view checkOwnerAndAccept  {
372     require (!(grammsTotal < (grammsForPair+2*grammsForConnector+2*
            grammsForWallet+grammsForRoot)) && !(grammsTotal < 5 ton)
            ,106);
373     require (!(address(this).balance < grammsTotal),105);
374     TvmCell body = tvm.encodeBody(IDEXRoot(rootDEX).createDEXpair,
            root0,root1,pairSoArg,connectorSoArg0,connectorSoArg1,
            rootSoArg,rootName,rootSymbol,rootDecimals,grammsForPair,
            grammsForRoot,grammsForConnector,grammsForWallet);
375     rootDEX.transfer({value:grammsTotal, bounce:false, flag: 1,
            body:body});
376   }
```

4.8.6 Function getAllDataPreparation

Returns		
address []	pairKeysR	
address []	rootKeysR	
Modifiers		
alwaysAccept	*no args*	

```
215   function getAllDataPreparation() public view alwaysAccept returns
          (address[] pairKeysR, address[] rootKeysR){
216     pairKeysR = pairKeys;
217     rootKeysR = rootKeys;
218   }
```

4.8.7 Function getBalance

Returns		
uint128	*no name*	

```
351   function getBalance() public pure responsible returns (uint128) {
352     return { value: 0, bounce: false, flag: 64 } thisBalance();
353   }
```

4.8.8 Function getCallback

Parameters		
uint256	id	
Returns		
address	token_wallet	
address	token_root	
uint128	amount	
uint256	sender_public_key	
address	sender_address	
address	sender_wallet	
address	original_gas_to	
uint128	updated_balance	
uint8	payload_arg0	
address	payload_arg1	
address	payload_arg2	
Modifiers		
checkOwnerAndAccept	*no args*	

```
318   function getCallback(uint id) public view checkOwnerAndAccept
          returns (
319     address token_wallet,
320     address token_root,
321     uint128 amount,
322     uint256 sender_public_key,
323     address sender_address,
324     address sender_wallet,
325     address original_gas_to,
326     uint128 updated_balance,
327     uint8 payload_arg0,
328     address payload_arg1,
329     address payload_arg2
330   ){
331     Callback cc = callbacks[id];
332     token_wallet = cc.token_wallet;
333     token_root = cc.token_root;
334     amount = cc.amount;
335     sender_public_key = cc.sender_public_key;
336     sender_address = cc.sender_address;
337     sender_wallet = cc.sender_wallet;
338     original_gas_to = cc.original_gas_to;
```

```
339     updated_balance = cc.updated_balance;
340     payload_arg0 = cc.payload_arg0;
341     payload_arg1 = cc.payload_arg1;
342     payload_arg2 = cc.payload_arg2;
343   }
```

4.8.9 Function getConnectorAddress

Parameters		
uint256	connectorSoArg	
Returns		
address	*no name*	

```
153   function getConnectorAddress(uint256 connectorSoArg) public view
          responsible returns (address) {
154     return { value: 0, bounce: false, flag: 64 }
            computeConnectorAddress( connectorSoArg);
155   }
```

4.8.10 Function getPairData

Parameters		
address	pairAddr	
Returns		
bool	pairStatus	
address	pairRootA	
address	pairWalletA	
address	pairRootB	
address	pairWalletB	
address	pairRootAB	
address	curPair	
Modifiers		
alwaysAccept	*no args*	

```
379   function getPairData(address pairAddr) public view alwaysAccept
          returns (
380     bool pairStatus,
381     address pairRootA,
```

```
382     address pairWalletA,
383     address pairRootB,
384     address pairWalletB,
385     address pairRootAB,
386     address curPair
387   ){
388     Pair cp = pairs[pairAddr];
389     pairStatus = cp.status;
390     pairRootA = cp.rootA;
391     pairWalletA = cp.walletA;
392     pairRootB = cp.rootB;
393     pairWalletB = cp.walletB;
394     pairRootAB = cp.rootAB;
395     curPair = pairAddr;
396   }
```

4.8.11 Function processLiquidity

Parameters		
address	pairAddr	
uint128	qtyA	
uint128	qtyB	
Returns		
bool	processLiquidityStatus	
Modifiers		
checkOwnerAndAccept	*no args*	

```
251   function processLiquidity(address pairAddr, uint128 qtyA, uint128
          qtyB) public view checkOwnerAndAccept returns (bool
        processLiquidityStatus) {
252     processLiquidityStatus = false;
253     if (isReadyToProvide(pairAddr)) {
254       Pair cp = pairs[pairAddr];
255       address connectorA = rootConnector[cp.rootA];
256       address connectorB = rootConnector[cp.rootB];
257       TvmBuilder builderA;
258       builderA.store(uint8(2), address(this), rootWallet[cp.rootAB
              ]);
259       TvmCell payloadA = builderA.toCell();
260       TvmBuilder builderB;
261       builderB.store(uint8(2), address(this), rootWallet[cp.rootAB
              ]);
262       TvmCell payloadB = builderB.toCell();
263       TvmCell bodyA = tvm.encodeBody(IDEXConnector(connectorA).
              transfer, cp.walletA, qtyA, payloadA);
264       TvmCell bodyB = tvm.encodeBody(IDEXConnector(connectorB).
              transfer, cp.walletB, qtyB, payloadB);
```

```
265       connectorA.transfer({value: GRAMS_PROCESS_LIQUIDITY, bounce:
              true, body:bodyA});
266       connectorB.transfer({value: GRAMS_PROCESS_LIQUIDITY, bounce:
              true, body:bodyB});
267       processLiquidityStatus = true;
268     }
269   }
```

4.8.12 Function processSwapA

Parameters		
address	pairAddr	
uint128	qtyA	
Returns		
bool	processSwapStatus	
Modifiers		
checkOwnerAndAccept	*no args*	

```
221   function processSwapA(address pairAddr, uint128 qtyA) public view
          checkOwnerAndAccept returns (bool processSwapStatus) {
222     processSwapStatus = false;
223     if (isReady(pairAddr)) {
224       Pair cp = pairs[pairAddr];
225       address connector = rootConnector[cp.rootA];
226       TvmBuilder builder;
227       builder.store(uint8(1), cp.rootB, rootWallet[cp.rootB]);
228       TvmCell payload = builder.toCell();
229       TvmCell body = tvm.encodeBody(IDEXConnector(connector).
              transfer, cp.walletA, qtyA, payload);
230       connector.transfer({value: GRAMS_SWAP, bounce:true, body:body
              });
231       processSwapStatus = true;
232     }
233   }
```

4.8.13 Function processSwapB

Parameters		
address	pairAddr	
uint128	qtyB	
Returns		
bool	processSwapStatus	
Modifiers		
checkOwnerAndAccept	*no args*	

```
236   function processSwapB(address pairAddr, uint128 qtyB) public view
          checkOwnerAndAccept returns (bool processSwapStatus) {
237     processSwapStatus = false;
238     if (isReady(pairAddr)) {
239       Pair cp = pairs[pairAddr];
240       address connector = rootConnector[cp.rootB];
241       TvmBuilder builder;
242       builder.store(uint8(1), cp.rootA, rootWallet[cp.rootA]);
243       TvmCell payload = builder.toCell();
244       TvmCell body = tvm.encodeBody(IDEXConnector(connector).
              transfer, cp.walletB, qtyB, payload);
245       connector.transfer({value: GRAMS_SWAP, bounce:true, body:body
              });
246       processSwapStatus = true;
247     }
248   }
```

4.8.14 Function returnLiquidity

Parameters		
address	pairAddr	
uint128	tokens	
Returns		
bool	returnLiquidityStatus	
Modifiers		
checkOwnerAndAccept	*no args*	

```
272   function returnLiquidity(address pairAddr, uint128 tokens) public
          view checkOwnerAndAccept returns (bool returnLiquidityStatus
        ) {
273     returnLiquidityStatus = false;
274     if (isReadyToProvide(pairAddr)) {
275     Pair cp = pairs[pairAddr];
276     TvmBuilder builder;
277     builder.store(uint8(3), rootWallet[cp.rootA], rootWallet[cp.
          rootB]);
278     TvmCell callback_payload = builder.toCell();
279     TvmCell body = tvm.encodeBody(IDEXConnector(rootConnector[cp.
          rootAB]).burn, tokens, pairAddr, callback_payload);
280     rootConnector[cp.rootAB].transfer({value:GRAMS_RETURN_LIQUIDITY
          , body:body});
281     returnLiquidityStatus = true;
282     }
283   }
```

4.8.15 Function sendTokens

Parameters		
address	tokenRoot	
address	to	
uint128	tokens	
uint128	grams	
Returns		
bool	sendTokenStatus	
Modifiers		
checkOwnerAndAccept	*no args*	

```
399   function sendTokens(address tokenRoot, address to, uint128 tokens
          , uint128 grams) public checkOwnerAndAccept view returns (
          bool sendTokenStatus){
400     sendTokenStatus = false;
401     if (rootConnector[tokenRoot] != address(0)) {
402       address connector = rootConnector[tokenRoot];
403       TvmBuilder builder;
404       builder.store(uint8(4), address(this), rootWallet[tokenRoot])
              ;
405       TvmCell payload = builder.toCell();
406       TvmCell body = tvm.encodeBody(IDEXConnector(connector).
              transfer, to, tokens, payload);
407       connector.transfer({value: grams, bounce:true, body:body});
408       sendTokenStatus = true;
409     }
410   }
```

4.8.16 Function setPair

Parameters		
address	arg0	
address	arg1	
address	arg2	
address	arg3	
address	arg4	
Modifiers		
alwaysAccept	*no args*	

```
127   function setPair(address arg0, address arg1, address arg2,
          address arg3, address arg4) public alwaysAccept override {
128     address dexpair = msg.sender;
129     if (pairs.exists(dexpair)){
130       Pair cp = pairs[dexpair];
131       cp.status = true;
132       cp.rootA = arg0;
133       cp.walletA = arg1;
134       cp.rootB = arg2;
135       cp.walletB = arg3;
136       cp.rootAB = arg4;
137       pairs[dexpair] = cp;
138     }
139   }
```

4.8.17 Function tokensReceivedCallback

Parameters		
address	token_wallet	
address	token_root	
uint128	amount	
uint256	sender_public_key	
address	sender_address	
address	sender_wallet	
address	original_gas_to	
uint128	updated_balance	
TvmCell	payload	
Modifiers		
alwaysAccept	*no args*	

```
286   function tokensReceivedCallback(
287     address token_wallet,
288     address token_root,
289     uint128 amount,
290     uint256 sender_public_key,
291     address sender_address,
292     address sender_wallet,
293     address original_gas_to,
294     uint128 updated_balance,
295     TvmCell payload
296   ) public override alwaysAccept {
297     Callback cc = callbacks[counterCallback];
298     cc.token_wallet = token_wallet;
299     cc.token_root = token_root;
300     cc.amount = amount;
301     cc.sender_public_key = sender_public_key;
302     cc.sender_address = sender_address;
```

```
303     cc.sender_wallet = sender_wallet;
304     cc.original_gas_to = original_gas_to;
305     cc.updated_balance = updated_balance;
306     TvmSlice slice = payload.toSlice();
307     (uint8 arg0, address arg1, address arg2) = slice.decode(uint8,
            address, address);
308     cc.payload_arg0 = arg0;
309     cc.payload_arg1 = arg1;
310     cc.payload_arg2 = arg2;
311     callbacks[counterCallback] = cc;
312     counterCallback++;
313     if (counterCallback > 10){delete callbacks[getFirstCallback()
            ];}
314   }
```

4.9 Internal Method Definitions

4.9.1 Function computeConnectorAddress

Parameters		
uint256	souint	
Returns		
address	*no name*	

```
142   function computeConnectorAddress(uint256 souint) private inline
          view returns (address) {
143     TvmCell stateInit = tvm.buildStateInit({
144       contr: DEXConnector,
145       varInit: { soUINT: souint, dexclient: address(this) },
146       code: codeDEXConnector,
147       pubkey: tvm.pubkey()
148     });
149     return address(tvm.hash(stateInit));
150   }
```

4.9.2 Function getFirstCallback

Returns		
uint256	*no name*	

```
121   function getFirstCallback() private view returns (uint) {
122     optional(uint, Callback) rc = callbacks.min();
123     if (rc.hasValue()) {(uint number, ) = rc.get();return number;}
          else {return 0;}
124   }
```

4.9.3 Function getQuotient

Parameters		
uint128	arg0	
uint128	arg1	
uint128	arg2	
Returns		
uint128	*no name*	

```
109   function getQuotient(uint128 arg0, uint128 arg1, uint128 arg2)
        private inline pure returns (uint128) {
110     (uint128 quotient, ) = math.muldivmod(arg0, arg1, arg2);
111     return quotient;
112   }
```

4.9.4 Function getRemainder

Parameters		
uint128	arg0	
uint128	arg1	
uint128	arg2	
Returns		
uint128	*no name*	

```
115   function getRemainder(uint128 arg0, uint128 arg1, uint128 arg2)
        private inline pure returns (uint128) {
116     (, uint128 remainder) = math.muldivmod(arg0, arg1, arg2);
117     return remainder;
118   }
```

4.9.5 Function isReady

Parameters		
address	pair	
Returns		
bool	*no name*	

```
198   function isReady(address pair) private inline view returns (bool)
          {
199     Pair cp = pairs[pair];
200     Connector ccA = connectors[rootConnector[cp.rootA]];
201     Connector ccB = connectors[rootConnector[cp.rootB]];
202     return cp.status && rootWallet.exists(cp.rootA) && rootWallet.
            exists(cp.rootB) && rootConnector.exists(cp.rootA) &&
            rootConnector.exists(cp.rootB) && ccA.status && ccB.status;
203   }
```

4.9.6 Function isReadyToProvide

Parameters		
address	pair	
Returns		
bool	*no name*	

```
206   function isReadyToProvide(address pair) private inline view
          returns (bool) {
207     Pair cp = pairs[pair];
208     Connector ccA = connectors[rootConnector[cp.rootA]];
209     Connector ccB = connectors[rootConnector[cp.rootB]];
210     return cp.status && rootWallet.exists(cp.rootA) && rootWallet.
            exists(cp.rootB) && rootWallet.exists(cp.rootAB) &&
            rootConnector.exists(cp.rootA) && rootConnector.exists(cp.
            rootB) && ccA.status && ccB.status;
211   }
```

4.9.7 Function thisBalance

Returns		
uint128	*no name*	

```
346   function thisBalance() private inline  pure returns (uint128) {
347     return address(this).balance;
348   }
```

Chapter 5

Contract DEXConnector

In file `DEXConnector.sol`

5.1 Contract Inheritance

IExpectedWalletAddressCallback	
IDEXConnector	

5.2 Constant Definitions

Advises
Use a naming convention to distinguish constants from other, such as all uppercase names.
Use `ton` unit instead of nanotons for cost constants to avoid numbers with too many zeroes.

uint128	GRAMS_TO_ROOT	Initialized to 500000000
uint128	GRAMS_TO_NEW_WALLET	Initialized to 250000000

```
19  uint128 constant GRAMS_TO_ROOT = 500000000;

20  uint128 constant GRAMS_TO_NEW_WALLET = 250000000;
```

5.3 Static Variable Definitions

Advises
Use a naming convention to distinguish static variables from global variables, such as `s_` prefix.

uint256	soUINT	
address	dexclient	
		used in @2.DEXConnector.transfer
		used in @2.DEXConnector.transfer
		used in @2.DEXConnector.setTransferCallback
		used in @2.DEXConnector.setTransferCallback
		used in @2.DEXConnector.setBouncedCallback
		used in @2.DEXConnector.setBouncedCallback
		used in @2.DEXConnector.expectedWalletAddressCallback
		used in @2.DEXConnector.expectedWalletAddressCallback
		used in @2.DEXConnector.deployEmptyWallet
		used in @2.DEXConnector.deployEmptyWallet
		used in @2.DEXConnector.deployEmptyWallet
		used in @2.DEXConnector.deployEmptyWallet
		used in @2.DEXConnector.burn
		used in @2.DEXConnector.burn

```
15   uint256 static public soUINT;

16   address static public dexclient;
```

5.4 Variable Definitions

Advises
Use a naming convention to distinguish global variables from local variables, such as `g_` or `m_` prefix.

address	drivenRoot	
		used in @2.DEXConnector.expectedWalletAddressCallback
		assigned in @2.DEXConnector.deployEmptyWallet
		used in @2.DEXConnector.deployEmptyWallet

		used in @2.DEXConnector.:constructor

```
22  address public drivenRoot;

23  address public driven;

24  bool public statusConnected;
```

5.5 Modifier Definitions

Advises
Calling tvm.accept() without checking pubkey should not be allowed

5.5.1 Modifier alwaysAccept

```
27  modifier alwaysAccept {
28    tvm.accept();
29    _;
30  }
```

5.5.2 Modifier checkOwnerAndAccept

```
32  modifier checkOwnerAndAccept {
33    // Check that message from contract owner.
34    require(msg.sender == dexclient, 101);
35    tvm.accept();
36    _;
37  }
```

5.6 Constructor Definitions

5.6.1 Constructor

Advises
Check who can call the constructor. If the constructor sets global values, only legitimate users should be allowed.
Check that every argument is protected by a require().
If external users are allowed, their pubkey should be verified (`require(msg.pubkey() != 0 && msg.pubkey() == tvm.pubkey(),100)` , and tvm.accept() should be called.

Modifiers		
`checkOwnerAndAccept`	*no args*	

```
39  constructor() public checkOwnerAndAccept {
40      statusConnected = false;
41  }
```

5.7 Public Method Definitions

5.7.1 Receive function

```
129   receive() external {
130   }
```

5.7.2 Function burn

Parameters		
uint128	tokens	
address	callback_address	
TvmCell	callback_payload	

```
116   function burn(uint128 tokens, address callback_address, TvmCell
          callback_payload) public override {
117     require(msg.sender == dexclient, 101);
118     tvm.rawReserve(address(this).balance - msg.value, 2);
119     TvmCell body = tvm.encodeBody(IBurnableByOwnerTokenWallet(
            driven).burnByOwner, tokens, 0, dexclient, callback_address
            , callback_payload);
120     driven.transfer({value: 0, bounce:true, flag: 128, body:body});
121   }
```

5.7.3 Function deployEmptyWallet

Parameters		
address	root	

```
60    function deployEmptyWallet(address root) public override {
61      require(msg.sender == dexclient, 101);
62      require(!(msg.value < GRAMS_TO_ROOT * 2), 103);
63      tvm.rawReserve(address(this).balance - msg.value, 2);
64      if (!statusConnected) {
65        drivenRoot = root;
```

```
66        TvmCell bodyD = tvm.encodeBody(IRootTokenContract(root).
              deployEmptyWallet, GRAMS_TO_NEW_WALLET, 0, address(this),
               dexclient);
67        root.transfer({value:GRAMS_TO_ROOT, bounce:true, body:bodyD})
              ;
68        TvmCell bodyA = tvm.encodeBody(IRootTokenContract(root).
              sendExpectedWalletAddress, 0, address(this), address(this
              ));
69        root.transfer({value:GRAMS_TO_ROOT, bounce:true, body:bodyA})
              ;
70        dexclient.transfer({value: 0, bounce:true, flag: 128});
71      } else {
72        dexclient.transfer({value: 0, bounce:true, flag: 128});
73      }
74    }
```

5.7.4 Function expectedWalletAddressCallback

Parameters		
address	wallet	
uint256	wallet_public_key	
address	owner_address	

```
77    function expectedWalletAddressCallback(address wallet, uint256
          wallet_public_key, address owner_address) public override {
78      require(msg.sender == drivenRoot && wallet_public_key == 0 &&
            owner_address == address(this), 102);
79      tvm.rawReserve(address(this).balance - msg.value, 2);
80      statusConnected = true;
81      driven = wallet;
82      TvmCell body = tvm.encodeBody(IDEXConnect(dexclient).
            connectCallback, wallet);
83      dexclient.transfer({value: 0, bounce:true, flag: 128, body:body
            });
84    }
```

5.7.5 Function getBalance

Returns		
uint128	balance	
Modifiers		
checkOwnerAndAccept	*no args*	

```
124   function getBalance() public pure checkOwnerAndAccept returns (
          uint128 balance){
125     balance = address(this).balance;
126   }
```

5.7.6 Function setBouncedCallback

```
95    function setBouncedCallback() public override {
96      require(msg.sender == dexclient, 101);
97      tvm.rawReserve(address(this).balance - msg.value, 2);
98      TvmCell body = tvm.encodeBody(ITONTokenWallet(driven).
            setBouncedCallback, dexclient);
99      driven.transfer({value: 0, bounce:true, flag: 128, body:body});
100   }
```

5.7.7 Function setTransferCallback

```
87    function setTransferCallback() public override {
88      require(msg.sender == dexclient, 101);
89      tvm.rawReserve(address(this).balance - msg.value, 2);
90      TvmCell body = tvm.encodeBody(ITONTokenWallet(driven).
            setReceiveCallback, dexclient, true);
91      driven.transfer({value: 0, bounce:true, flag: 128, body:body});
92    }
```

5.7.8 Function transfer

Parameters		
address	to	
uint128	tokens	
TvmCell	payload	

```
108   function transfer(address to, uint128 tokens, TvmCell payload)
          public override {
109     require(msg.sender == dexclient, 101);
110     tvm.rawReserve(address(this).balance - msg.value, 2);
```

```
111     TvmCell body = tvm.encodeBody(ITONTokenWallet(driven).transfer,
            to, tokens, 0, dexclient, true, payload);
112     driven.transfer({value: 0, bounce:true, flag: 128, body:body});
113   }
```

5.8 Internal Method Definitions

5.8.1 Function getQuotient

Parameters		
uint128	arg0	
uint128	arg1	
uint128	arg2	
Returns		
uint128	*no name*	

```
48   function getQuotient(uint128 arg0, uint128 arg1, uint128 arg2)
         private inline pure returns (uint128) {
49     (uint128 quotient, ) = math.muldivmod(arg0, arg1, arg2);
50     return quotient;
51   }
```

5.8.2 Function getRemainder

Parameters		
uint128	arg0	
uint128	arg1	
uint128	arg2	
Returns		
uint128	*no name*	

```
54   function getRemainder(uint128 arg0, uint128 arg1, uint128 arg2)
         private inline pure returns (uint128) {
55     (, uint128 remainder) = math.muldivmod(arg0, arg1, arg2);
56     return remainder;
57   }
```

6.6 Modifier Definitions

Advises
Calling tvm.accept() without checking pubkey should not be allowed

6.6.1 Modifier alwaysAccept

```
71  modifier alwaysAccept {
72    tvm.accept();
73    _;
74  }
```

6.6.2 Modifier checkOwnerAndAccept

```
76  modifier checkOwnerAndAccept {
77    require(msg.sender == rootDEX, 102);
78    tvm.accept();
79    _;
80  }
```

6.6.3 Modifier checkPubKeyAndAccept

```
82  modifier checkPubKeyAndAccept {
83    require(msg.pubkey() == tvm.pubkey(), 103);
84    tvm.accept();
85    _;
86  }
```

6.7 Constructor Definitions

6.7.1 Constructor

Advises
Check who can call the constructor. If the constructor sets global values, only legitimate users should be allowed.
Check that every argument is protected by a require().
If external users are allowed, their pubkey should be verified (`require(msg.pubkey() != 0 && msg.pubkey() == tvm.pubkey(),100)` , and tvm.accept() should be called.

Parameters		
`uint256`	`souintA`	
`uint256`	`souintB`	
`uint128`	`gramsDeployConnector`	
`uint128`	`gramsDeployWallet`	
Modifiers		
`checkOwnerAndAccept`	*no args*	

```
88  constructor(uint256 souintA, uint256 souintB, uint128
        gramsDeployConnector, uint128 gramsDeployWallet) public
        checkOwnerAndAccept {
89    counterCallback = 0;
90    connectRoot(rootA, souintA, gramsDeployConnector,
          gramsDeployWallet);
91    connectRoot(rootB, souintB, gramsDeployConnector,
          gramsDeployWallet);
92  }
```

6.8 Public Method Definitions

6.8.1 Receive function

```
609 receive() external {
610 }
```

6.8.2 Function burnCallback

Parameters

            rootOut],1);
160     uint128 denominator = amountInWithFee + math.muldiv(
            balanceReserve[rootIn],1000,1);
161     return math.muldiv(1,numerator,denominator);
162   }
```

6.9.6 Function getFirstCallback

Returns		
uint256	*no name*	

```
242   function getFirstCallback() private view returns (uint) {
243     optional(uint, Callback) rc = callbacks.min();
244     if (rc.hasValue()) {(uint number, ) = rc.get();return number;}
            else {return 0;}
245   }
```

6.9.7 Function getQuotient

Parameters		
uint128	min	
uint128	max	
Returns		
uint128	*no name*	

```
165   function getQuotient(uint128 min, uint128 max) private inline
          pure returns (uint128) {
166     (uint128 quotient, ) = math.muldivmod(1, max, min);
167     return quotient;
168   }
```

6.9.8 Function getRemainder

Parameters		
uint128	min	
uint128	max	
Returns		
uint128	*no name*	

```
171   function getRemainder(uint128 min, uint128 max) private inline
          pure returns (uint128) {
172     (, uint128 remainder) = math.muldivmod(1, max, min);
173     return remainder;
174   }
```

6.9.9 Function liquidityA

Parameters		
uint128	arg0	
Returns		
uint128	*no name*	

```
191   function liquidityA(uint128 arg0) private inline view returns (
          uint128) {
192     require(arg0 > 0, 105);
193     require(totalSupply > 0, 110);
194     require(balanceReserve[rootA] > 0, 108);
195     return math.muldiv(arg0, totalSupply, balanceReserve[rootA]);
196   }
```

6.9.10 Function liquidityB

Parameters		
uint128	arg1	
Returns		
uint128	*no name*	

```
199   function liquidityB(uint128 arg1) private inline view returns (
          uint128) {
200     require(arg1 > 0, 105);
201     require(totalSupply > 0, 110);
202     require(balanceReserve[rootB] > 0, 109);
203     return math.muldiv(arg1, totalSupply, balanceReserve[rootB]);
204   }
```

6.9.11 Function qtyAforB

Parameters		
uint128	arg1	
Returns		
uint128	*no name*	

```
184   function qtyAforB(uint128 arg1) private inline view returns (
          uint128) {
185     require(arg1 > 0, 107);
186     require(balanceReserve[rootA] > 0 && balanceReserve[rootB] > 0,
            106);
187     return math.muldiv(arg1, balanceReserve[rootA], balanceReserve[
            rootB]);
188   }
```

6.9.12 Function qtyBforA

Parameters		
uint128	arg0	
Returns		
uint128	*no name*	

```
177   function qtyBforA(uint128 arg0) private inline view returns (
          uint128) {
178     require(arg0 > 0, 105);
179     require(balanceReserve[rootA] > 0 && balanceReserve[rootB] > 0,
            106);
180     return math.muldiv(arg0, balanceReserve[rootB], balanceReserve[
            rootA]);
181   }
```

6.9.13 Function thisBalance

Returns		
uint128	*no name*	

```
599 function thisBalance() private inline  pure returns (uint128) {
600   return address(this).balance;
601 }
```

Chapter 7

Contract DEXroot

In file `DEXRoot.sol`

7.1 Contract Inheritance

IDEXRoot	

7.2 Type Definitions

Advises
Check that types have the correct integer types (Pubkey : uint256, Amount: uint128, Time: uint64).

7.2.1 Struct Pair

root0	address	
root1	address	
rootLP	address	

```
24  struct Pair {
25    address root0;
26    address root1;
27    address rootLP;
28  }
```

7.3 Constant Definitions

Advises
Use a naming convention to distinguish constants from other, such as all uppercase names.
Use `ton` unit instead of nanotons for cost constants to avoid numbers with too many zeroes.

uint128	GRAMS_CREATE_DEX_CLIENT	Initialized to 1 ton

```
42  uint128 constant public GRAMS_CREATE_DEX_CLIENT = 1 ton;
```

7.4 Static Variable Definitions

Advises
Use a naming convention to distinguish static variables from global variables, such as `s_` prefix.

uint256	soUINT	

```
13  uint256 static public soUINT;
```

7.5 Variable Definitions

Advises
Use a naming convention to distinguish global variables from local variables, such as `g_` or `m_` prefix.

34   mapping(address => uint256) public clients;
35   address[] public clientKeys;
37   mapping(address => uint128) public balanceOf;
38   mapping(uint256 => address) public creators;
```

7.6 Modifier Definitions

Advises
Calling tvm.accept() without checking pubkey should not be allowed

7.6.1 Modifier alwaysAccept

```
45   modifier alwaysAccept {
46     tvm.accept();
47     _;
48   }
```

7.6.2 Modifier checkOwnerAndAccept

```
51   modifier checkOwnerAndAccept {
52     require(msg.pubkey() == tvm.pubkey(), 101);
53     tvm.accept();
54     _;
55   }
```

7.6.3 Modifier checkCreatorAndAccept

```
58   modifier checkCreatorAndAccept {
59     require(msg.pubkey() != 0, 103);
60     tvm.accept();
61     _;
62   }
```

7.7 Constructor Definitions

7.7.1 Constructor

Advises
Check who can call the constructor. If the constructor sets global values, only legitimate users should be allowed.
Check that every argument is protected by a require().
If external users are allowed, their pubkey should be verified (`require(msg.pubkey() != 0 && msg.pubkey() == tvm.pubkey(),100)` , and tvm.accept() should be called.

```
65   constructor() public {
66     require(tvm.pubkey() == msg.pubkey(), 102);
67     tvm.accept();
68   }
```

7.8 Public Method Definitions

7.8.1 Receive function

```
76   receive() external {
77     balanceOf[msg.sender] += msg.value;
78   }
```

7.8.2 Function checkPubKey

Parameters		
uint256	pubkey	
Returns		
bool	status	
address	dexclient	
Modifiers		
alwaysAccept	*no args*	

```
328   function checkPubKey(uint256 pubkey) public view alwaysAccept
          returns (bool status, address dexclient) {
329     status = pubkeys.exists(pubkey);
330     dexclient = pubkeys[pubkey];
331   }
```

7.8.3 Function createDEXclient

Parameters		
uint256	pubkey	
uint256	souint	
Returns		
address	deployedAddress	
bool	statusCreate	
Modifiers		
alwaysAccept	*no args*	

```
122   function createDEXclient(uint256 pubkey, uint256 souint) public
          alwaysAccept returns (address deployedAddress, bool
          statusCreate){
123     statusCreate = false;
124     deployedAddress = address(0);
125     uint128 prepay = balanceOf[creators[pubkey]];
126     require (!pubkeys.exists(pubkey) && !(prepay <
            GRAMS_CREATE_DEX_CLIENT), 106);
127     delete balanceOf[creators[pubkey]];
128     TvmCell stateInit = tvm.buildStateInit({
129       contr: DEXClient,
130       varInit: {rootDEX:address(this),soUINT:souint,
              codeDEXConnector:codeDEXconnector},
```

```
131       code: codeDEXclient,
132       pubkey: pubkey
133     });
134     deployedAddress = new DEXClient{
135       stateInit: stateInit,
136       flag: 0,
137       bounce : false,
138       value : (prepay - 3100000)
139     }();
140     pubkeys[pubkey] = deployedAddress;
141     clients[deployedAddress] = pubkey;
142     clientKeys.push(deployedAddress);
143     statusCreate = true;
144   }
```

7.8.4 Function createDEXpair

Parameters		
address	root0	
address	root1	
uint256	pairSoArg	
uint256	connectorSoArg0	
uint256	connectorSoArg1	
uint256	rootSoArg	
bytes	rootName	
bytes	rootSymbol	
uint8	rootDecimals	
uint128	grammsForPair	
uint128	grammsForRoot	
uint128	grammsForConnector	
uint128	grammsForWallet	

```
237   function createDEXpair(
238     address root0,
239     address root1,
240     uint256 pairSoArg,
241     uint256 connectorSoArg0,
242     uint256 connectorSoArg1,
243     uint256 rootSoArg,
244     bytes rootName,
245     bytes rootSymbol,
246     uint8 rootDecimals,
247     uint128 grammsForPair,
248     uint128 grammsForRoot,
249     uint128 grammsForConnector,
250     uint128 grammsForWallet
```

```
251   ) public override {
252     require(root0 != address(0) && root1 != address(0) ,104);
253     require(!(grammsForPair < 500000000) && !(grammsForRoot <
            500000000) && !(grammsForConnector < 500000000) && !(
            grammsForWallet < 500000000),105);
254     tvm.rawReserve(address(this).balance - msg.value, 2);
255     uint128 grammsNeeded = grammsForPair + (2 * grammsForConnector)
             + (2 * grammsForWallet) + grammsForRoot;
256     if (clients.exists(msg.sender) && !(msg.value < grammsNeeded)
            && !(root0 == root1) && !roots[root0].exists(root1) && !
            roots[root1].exists(root0)) {
257       TvmCell stateInitR = tvm.buildStateInit({
258         contr: RootTokenContract,
259         varInit: {
260           _randomNonce:rootSoArg,
261           name:rootName,

306         msg.sender.transfer({ value: 0, flag: 128});
307       }
308     }
```

7.8.5 Function getBalanceTONgrams

Returns		
uint128	balanceTONgrams	
Modifiers		
alwaysAccept	*no args*	

```
334     function getBalanceTONgrams() public pure alwaysAccept returns (
            uint128 balanceTONgrams){
335       return address(this).balance;
336     }
```

7.8.6 Function getClientAddress

Parameters		
uint256	clientPubKey	
uint256	clientSoArg	
Returns		
address	*no name*	

```
118     function getClientAddress(uint256 clientPubKey, uint256
            clientSoArg) public view responsible returns (address) {
119       return { value: 0, bounce: false, flag: 64 }
              computeClientAddress(clientPubKey,clientSoArg);
120     }
```

7.8.7 Function getConnectorAddress

Parameters		
uint256	connectorPubKey	
uint256	connectorSoArg	
address	connectorCommander	
Returns		
address	*no name*	

```
233   function getConnectorAddress(uint256 connectorPubKey, uint256
          connectorSoArg, address connectorCommander) public view
          responsible returns (address) {
234     return { value: 0, bounce: false, flag: 64 }
            computeConnectorAddress(connectorPubKey, connectorSoArg,
            connectorCommander);
235   }
```

7.8.8 Function getPairAddress

Parameters		
uint256	pairPubKey	
uint256	pairSoArg	
address	pairCreator	
address	pairRootA	
address	pairRootB	
address	pairRootAB	
Returns		
address	*no name*	

```
171   function getPairAddress(
172     uint256 pairPubKey,
173     uint256 pairSoArg,
174     address pairCreator,
175     address pairRootA,
176     address pairRootB,
177     address pairRootAB
178   ) public view responsible returns (address) {
179     return { value: 0, bounce: false, flag: 64 } computePairAddress
            (pairPubKey,pairSoArg,pairCreator,pairRootA,pairRootB,
            pairRootAB);
```

```
180   }
```

7.8.9 Function getPairByRoots01

Parameters		
address	root0	
address	root1	
Returns		
address	pairAddr	
Modifiers		
alwaysAccept	*no args*	

```
314   function getPairByRoots01(address root0, address root1) public
          view alwaysAccept returns (address pairAddr) {
315     pairAddr = roots[root0][root1];
316   }
```

7.8.10 Function getPairByRoots10

Parameters		
address	root1	
address	root0	
Returns		
address	pairAddr	
Modifiers		
alwaysAccept	*no args*	

```
318   function getPairByRoots10(address root1, address root0) public
          view alwaysAccept returns (address pairAddr) {
319     pairAddr = roots[root1][root0];
320   }
```

7.8.11 Function getRootTokenAddress

Parameters		
uint256	rootPubKey	
uint256	rootSoArg	
bytes	rootName	
bytes	rootSymbol	
uint8	rootDecimals	
Returns		
address	*no name*	

```
213   function getRootTokenAddress(
214     uint256 rootPubKey,
215     uint256 rootSoArg,
216     bytes rootName,
217     bytes rootSymbol,
218     uint8 rootDecimals
219   ) public view responsible returns (address) {
220     return { value: 0, bounce: false, flag: 64 }
            computeRootTokenAddress(rootPubKey,rootSoArg,rootName,
            rootSymbol,rootDecimals);
221   }
```

7.8.12 Function getRootsByPair

Parameters		
address	pairAddr	
Returns		
address	root0	
address	root1	
Modifiers		
alwaysAccept	*no args*	

```
322   function getRootsByPair(address pairAddr) public view
          alwaysAccept returns (address root0, address root1) {
323     Pair cp = pairs[pairAddr];
324     root0 = cp.root0;
325     root1 = cp.root1;
326   }
```

7.8.13 Function sendTransfer

Parameters		
address	dest	
uint128	value	
bool	bounce	
Modifiers		
checkOwnerAndAccept	*no args*	

```
71  function sendTransfer(address dest, uint128 value, bool bounce)
        public pure checkOwnerAndAccept {
72    dest.transfer(value, bounce, 0);
73  }
```

7.8.14 Function setCreator

Parameters		
address	giverAddr	
Modifiers		
checkCreatorAndAccept	*no args*	

```
100 function setCreator(address giverAddr) public
        checkCreatorAndAccept {
101   uint256 pubkey = msg.pubkey();
102   creators[pubkey] = giverAddr;
103 }
```

7.8.15 Function setDEXclientCode

Parameters		
TvmCell	code	
Modifiers		
checkOwnerAndAccept	*no args*	

```
80    function setDEXclientCode(TvmCell code) public
          checkOwnerAndAccept {
81      codeDEXclient = code;
82    }
```

7.8.16 Function setDEXconnectorCode

Parameters		
TvmCell	code	
Modifiers		
checkOwnerAndAccept	*no args*	

```
88    function setDEXconnectorCode(TvmCell code) public
          checkOwnerAndAccept {
89      codeDEXconnector = code;
90    }
```

7.8.17 Function setDEXpairCode

Parameters		
TvmCell	code	
Modifiers		
checkOwnerAndAccept	*no args*	

```
84    function setDEXpairCode(TvmCell code) public checkOwnerAndAccept
          {
85      codeDEXpair = code;
86    }
```

7.8.18 Function setRootTokenCode

Parameters		
TvmCell	code	
Modifiers		
checkOwnerAndAccept	*no args*	

```
92    function setRootTokenCode(TvmCell code) public
          checkOwnerAndAccept {
93      codeRootToken = code;
94    }
```

7.8.19 Function setTONTokenWalletCode

Parameters		
TvmCell	code	
Modifiers		
checkOwnerAndAccept	*no args*	

```
96    function setTONTokenWalletCode(TvmCell code) public
          checkOwnerAndAccept {
97      codeTONTokenWallet = code;
98    }
```

7.9 Internal Method Definitions

7.9.1 Function computeClientAddress

Parameters		
uint256	pubkey	
uint256	souint	
Returns		
address	*no name*	

```
108   function computeClientAddress(uint256 pubkey, uint256 souint)
          private inline view returns (address) {
109     TvmCell stateInit = tvm.buildStateInit({
110       contr: DEXClient,
111       varInit: {rootDEX:address(this),soUINT:souint,
              codeDEXConnector:codeDEXconnector},
112       code: codeDEXclient,
113       pubkey: pubkey
114     });
115     return address(tvm.hash(stateInit));
116   }
```

7.9.2 Function computeConnectorAddress

Parameters		
uint256	pubkey	
uint256	souint	
address	commander	
Returns		
address	*no name*	

```
223   function computeConnectorAddress(uint256 pubkey, uint256 souint,
          address commander) private inline view returns (address) {
224     TvmCell stateInit = tvm.buildStateInit({
225       contr: DEXConnector,
226       varInit: { soUINT: souint, dexclient: commander },
227       code: codeDEXconnector,
228       pubkey: pubkey
229     });
230     return address(tvm.hash(stateInit));
231   }
```

7.9.3 Function computePairAddress

Parameters		
uint256	pubkey	
uint256	souint	
address	creator	
address	rootA	
address	rootB	
address	rootAB	
Returns		
address	*no name*	

```
146   function computePairAddress(
147     uint256 pubkey,
148     uint256 souint,
149     address creator,
150     address rootA,
151     address rootB,
152     address rootAB
153   ) private inline view returns (address){
```

```
    TvmCell stateInit = tvm.buildStateInit({
      contr: DEXPair,
      varInit: {
        rootDEX:address(this),
        soUINT:souint,
        creator:creator,
        codeDEXConnector:codeDEXconnector,
        rootA:rootA,
        rootB:rootB,
        rootAB:rootAB
      },
      code: codeDEXpair,
      pubkey : pubkey
    });
    return address(tvm.hash(stateInit));
  }
```

7.9.4 Function computeRootTokenAddress

Parameters		
uint256	pubkey	
uint256	souint	
bytes	name	
bytes	symbol	
uint8	decimals	
Returns		
address	*no name*	

```
  function computeRootTokenAddress(
    uint256 pubkey,
    uint256 souint,
    bytes name,
    bytes symbol,
    uint8 decimals
  ) private inline view returns (address){
    TvmCell stateInit = tvm.buildStateInit({
      contr: RootTokenContract,
      varInit: {
        _randomNonce:souint,
        name:name,
        symbol:symbol,
        decimals:decimals,
        wallet_code:codeTONTokenWallet
      },
      code: codeRootToken,
      pubkey : pubkey
    });
    return address(tvm.hash(stateInit));
```

```
202     }
```

Chapter 8

Contract RootTokenContract

In file `RootTokenContract.sol`

8.1 Contract Inheritance

IRootTokenContract	
IBurnableTokenRootContract	
IBurnableByRootTokenRootContract	
IPausable	
ITransferOwner	
ISendSurplusGas	
IVersioned	

8.2 Static Variable Definitions

Advises
Use a naming convention to distinguish static variables from global variables, such as `s_` prefix.

uint256	_randomNonce	
bytes	name	
		used in @5.RootTokenContract.getDetails
bytes	symbol	
		used in @5.RootTokenContract.getDetails
uint8	decimals	
		used in @5.RootTokenContract.getDetails
TvmCell	wallet_code	
		used in @5.RootTokenContract.getWalletCode
		used in @5.RootTokenContract.getExpectedWalletAddress
		used in @5.RootTokenContract.getExpectedWalletAddress
		used in @5.RootTokenContract.deployWallet
		used in @5.RootTokenContract.deployWallet
		used in @5.RootTokenContract.deployEmptyWallet

```
28     uint256 static _randomNonce;

30     bytes public static name;

31     bytes public static symbol;

32     uint8 public static decimals;

34     TvmCell static wallet_code;
```

8.3 Variable Definitions

Advises
Use a naming convention to distinguish global variables from local variables, such as `g_` or `m_` prefix.

uint128	total_supply	
		assigned in @5.RootTokenContract.tokensBurned
		used in @5.RootTokenContract.tokensBurned
		assigned in @5.RootTokenContract.mint
		used in @5.RootTokenContract.mint
		used in @5.RootTokenContract.getTotalSupply
		used in @5.RootTokenContract.getDetails
		assigned in @5.RootTokenContract.deployWallet
		used in @5.RootTokenContract.deployWallet
		assigned in @5.RootTokenContract.:onBounce
		used in @5.RootTokenContract.:onBounce

		used[86] in @5.RootTokenContract.isInternalOwner
		used in @5.RootTokenContract.getDetails
		used in @5.RootTokenContract.deployWallet
		used in @5.RootTokenContract.deployWallet

```
36      uint128 total_supply;

38      uint256 root_public_key;

39      address root_owner_address;

40      uint128 public start_gas_balance;

42      bool public paused;
```

8.4 Modifier Definitions

Advises
Calling tvm.accept() without checking pubkey should not be allowed

8.4.1 Modifier onlyOwner

```
458     modifier onlyOwner() {
459         require(isOwner(), RootTokenContractErrors.
                error_message_sender_is_not_my_owner);
460         _;
461     }
```

8.4.2 Modifier onlyInternalOwner

```
463     modifier onlyInternalOwner() {
464         require(isInternalOwner(), RootTokenContractErrors.
                error_message_sender_is_not_my_owner);
465         _;
466     }
```

8.5 Constructor Definitions

8.5.1 Constructor

Advises
Check who can call the constructor. If the constructor sets global values, only legitimate users should be allowed.
Check that every argument is protected by a require().
If external users are allowed, their pubkey should be verified (`require(msg.pubkey() != 0 && msg.pubkey() == tvm.pubkey(),100)` , and tvm.accept() should be called.

Parameters		
uint256	root_public_key_	
address	root_owner_address_	

```
48      constructor(uint256 root_public_key_, address
            root_owner_address_) public {
49          require((root_public_key_ != 0 && root_owner_address_.value
                == 0) ||
50                  (root_public_key_ == 0 && root_owner_address_.value
                        != 0),
51                  RootTokenContractErrors.
                        error_define_public_key_or_owner_address);
52          tvm.accept();
53
54          root_public_key = root_public_key_;
55          root_owner_address = root_owner_address_;
56
57          total_supply = 0;
58          paused = false;
59
60          start_gas_balance = address(this).balance;
61      }
```

8.6 Public Method Definitions

8.6.1 Fallback function

```
523     fallback() external {
524     }
```

8.6.2 OnBounce function

Parameters		
TvmSlice	slice	

```
514     onBounce(TvmSlice slice) external {
515         tvm.accept();
516         uint32 functionId = slice.decode(uint32);
517         if (functionId == tvm.functionId(ITONTokenWallet.accept)) {
518             uint128 latest_bounced_tokens = slice.decode(uint128);
519             total_supply -= latest_bounced_tokens;
520         }
521     }
```

8.6.3 Function deployEmptyWallet

Parameters		
uint128	deploy_grams	
uint256	wallet_public_key_	
address	owner_address_	
address	gas_back_address	
Returns		
address	*no name*	

```
237     function deployEmptyWallet(
238         uint128 deploy_grams,
239         uint256 wallet_public_key_,
240         address owner_address_,
241         address gas_back_address
242     )
243         override
244         external
245     returns (
246         address
247     ) {
248         require((owner_address_.value != 0 && wallet_public_key_ ==
                0) ||

372                 sender_public_key,
```

```
                sender_address,
                expectedWalletAddress,
                send_gas_to
            );
        }

    }
```

8.6.17 Function transferOwner

Parameters		
uint256	root_public_key_	
address	root_owner_address_	
Modifiers		
onlyOwner	*no args*	

```
    function transferOwner(
        uint256 root_public_key_,
        address root_owner_address_
    )
        override
        external
        onlyOwner
    {
        require((root_public_key_ != 0 && root_owner_address_.value
             == 0) ||
                (root_public_key_ == 0 && root_owner_address_.value
                     != 0),
                RootTokenContractErrors.
                    error_define_public_key_or_owner_address);
        tvm.accept();
        root_public_key = root_public_key_;
        root_owner_address = root_owner_address_;
    }
```

8.7 Internal Method Definitions

8.7.1 Function getExpectedWalletAddress

Parameters		
uint256	wallet_public_key_	
address	owner_address_	
Returns		
address	*no name*	

```
485     function getExpectedWalletAddress(
486         uint256 wallet_public_key_,
487         address owner_address_
488     )
489         private
490         inline
491         view
492     returns (
493         address
494     ) {
495         TvmCell stateInit = tvm.buildStateInit({
496             contr: TONTokenWallet,
497             varInit: {
498                 root_address: address(this),
499                 code: wallet_code,
500                 wallet_public_key: wallet_public_key_,
501                 owner_address: owner_address_
502             },
503             pubkey: wallet_public_key_,
504             code: wallet_code
505         });
506 
507         return address(tvm.hash(stateInit));
508     }
```

8.7.2 Function isExternalOwner

Returns		
bool	*no name*	

```
476     function isExternalOwner() private inline view returns (bool) {
477         return root_public_key != 0 && root_public_key == msg.
                pubkey();
478     }
```

8.7.3 Function isInternalOwner

Returns		
bool	*no name*	

```
472     function isInternalOwner() private inline view returns (bool) {
```

```
473         return root_owner_address.value != 0 && root_owner_address
                == msg.sender;
474     }
```

8.7.4 Function isOwner

Returns		
bool	*no name*	

```
468     function isOwner() private inline view returns (bool) {
469         return isInternalOwner() || isExternalOwner();
470     }
```

36      bool allow_non_notifiable;
```

9.4 Modifier Definitions

Advises
Calling tvm.accept() without checking pubkey should not be allowed

9.4.1 Modifier onlyRoot

```
598     modifier onlyRoot() {
599         require(root_address == msg.sender, TONTokenWalletErrors.
                error_message_sender_is_not_my_root);
600         _;
601     }
```

9.4.2 Modifier onlyOwner

```
603     modifier onlyOwner() {
604         require((owner_address.value != 0 && owner_address == msg.
                sender) ||
605                 (wallet_public_key != 0 && wallet_public_key == msg
                        .pubkey()),
606                 TONTokenWalletErrors.
                        error_message_sender_is_not_my_owner);
607         _;
608     }
```

9.4.3 Modifier onlyInternalOwner

```
610     modifier onlyInternalOwner() {
611         require(owner_address.value != 0 && owner_address == msg.
                sender);
612         _;
613     }
```

9.5 Constructor Definitions

9.5.1 Constructor

Advises
Check who can call the constructor. If the constructor sets global values, only legitimate users should be allowed.
Check that every argument is protected by a require().
If external users are allowed, their pubkey should be verified (`require(msg.pubkey() != 0 && msg.pubkey() == tvm.pubkey(),100)` , and tvm.accept() should be called.

```
43      constructor() public {
44          require(wallet_public_key == tvm.pubkey() && (owner_address
                .value == 0 || wallet_public_key == 0));
45          tvm.accept();
46
47          allow_non_notifiable = true;
48
49          if (owner_address.value != 0) {
50              ITokenWalletDeployedCallback(owner_address).
                    notifyWalletDeployed{value: 0.00001 ton, flag: 1}(
                    root_address);
51          }
52      }
```

9.6 Public Method Definitions

9.6.1 Fallback function

```
683     fallback() external {
684     }
```

9.6.2 OnBounce function

Parameters		
TvmSlice	body	

```
653     onBounce(TvmSlice body) external {
654         tvm.accept();
655 
656         uint32 functionId = body.decode(uint32);
657         if (functionId == tvm.functionId(ITONTokenWallet.
                internalTransfer)) {
658             uint128 tokens = body.decode(uint128);
659             balance_ += tokens;
660 
661             if (bounced_callback.value != 0) {
662                 tvm.rawReserve(address(this).balance - msg.value,
                        2);
663                 ITokensBouncedCallback(bounced_callback).
                        tokensBouncedCallback{ value: 0, flag: 128 }(
664                     address(this),
665                     root_address,
666                     tokens,
667                     msg.sender,
668                     balance_
669                 );
670             } else if (owner_address.value != 0) {
671                 tvm.rawReserve(math.max(TONTokenWalletConstants.
                        target_gas_balance, address(this).balance - msg
                        .value), 2);
672                 owner_address.transfer({ value: 0, flag: 128 });
673             }
674         } else if (functionId == tvm.functionId(
                IBurnableTokenRootContract.tokensBurned)) {
675             balance_ += body.decode(uint128);
676             if (owner_address.value != 0) {
677                 tvm.rawReserve(math.max(TONTokenWalletConstants.
                        target_gas_balance, address(this).balance - msg
                        .value), 2);
678                 owner_address.transfer({ value: 0, flag: 128 });
679             }
680         }
681     }
```

9.6.3 Function accept

Parameters		
uint128	tokens	
Modifiers		
onlyRoot	*no args*	

```
96      function accept(
97          uint128 tokens
98      )
99          override
```

```
100         external
101         onlyRoot
102     {
103         tvm.accept();
104         balance_ += tokens;
105     }
```

9.6.4 Function allowance

Returns		
AllowanceInfo	*no name*	

```
107     function allowance() override external view responsible returns
            (AllowanceInfo) {
108         return { value: 0, bounce: false, flag: 64 } (allowance_.
                hasValue() ? allowance_.get() : AllowanceInfo(0,
                address.makeAddrStd(0, 0)));
109     }
```

9.6.5 Function approve

Parameters		
address	spender	
uint128	remaining_tokens	
uint128	tokens	
Modifiers		
onlyOwner	*no args*	

```
119     function approve(
120         address spender,
121         uint128 remaining_tokens,
122         uint128 tokens
123     )
124         override
125         external
126         onlyOwner
127     {
128         require(remaining_tokens == 0 || !allowance_.hasValue(),

9.7 Internal Method Definitions

9.7.1 Function getExpectedAddress

Parameters		
uint256	wallet_public_key_	
address	owner_address_	
Returns		
address	*no name*	

```
620     function getExpectedAddress(
621         uint256 wallet_public_key_,
622         address owner_address_
623     )
624         private
625         inline
626         view
627     returns (
628         address
629     ) {
630         TvmCell stateInit = tvm.buildStateInit({
631             contr: TONTokenWallet,
